

## Stable bar Plymouth

**Customer Aspirations:** Having fitted a Stuv in the Stable Bar in Newquay the team wanted to fit something just as eye catching and unique into their latest pub in Plymouth.

**Customer Requirements:** Something with a very large output to heat this large area.

The Scan DSA 5 is perfect for this situation. Elevated from the ground so the fire can be seen across the whole bar area, even when the seating is in place, it has a very large heat output and the added design feature of a vertical lift door.
