

Dru Global 100 Triple BF

DRU Global gas fires have imaginative designs with robust engineering standards and are built to last for years and years to come.

Global gas fires are available in both balanced flue and conventional flue formats. The balanced flue versions can be installed in homes with or without a traditional chimney, offering style, efficiency and flexibility. The conventional flue versions are designed to be inserted into Class 1 British or Irish chimneys, with ease and economy of installation.

Global 100 BF Triple is a classic contemporary 1 metre wide and 42 cms high letterbox gas fire with a 3-sided glass window that can be viewed from all angles. It has impressive log, stone or anthracite glass fire displays and enhanced energy efficiency of 88%.

The interior of the fire is available in a choice of black or mirrored Ceraglass for extra depth of vision and it has a generous 7.5 kW heat output.

Its balanced flue technology enables it to be installed in many locations around the home, including dividing walls and room features, and it requires very little maintenance.

Like all DRU gas fires, it has a smart electronic remote control with a room temperature display so you can set your ideal temperature for maximum comfort whatever the weather.

Specifications

Height: 766

Width: 1096

Depth: 386

Fuel: Gas

Output: 3kw - 7kw
